How to play

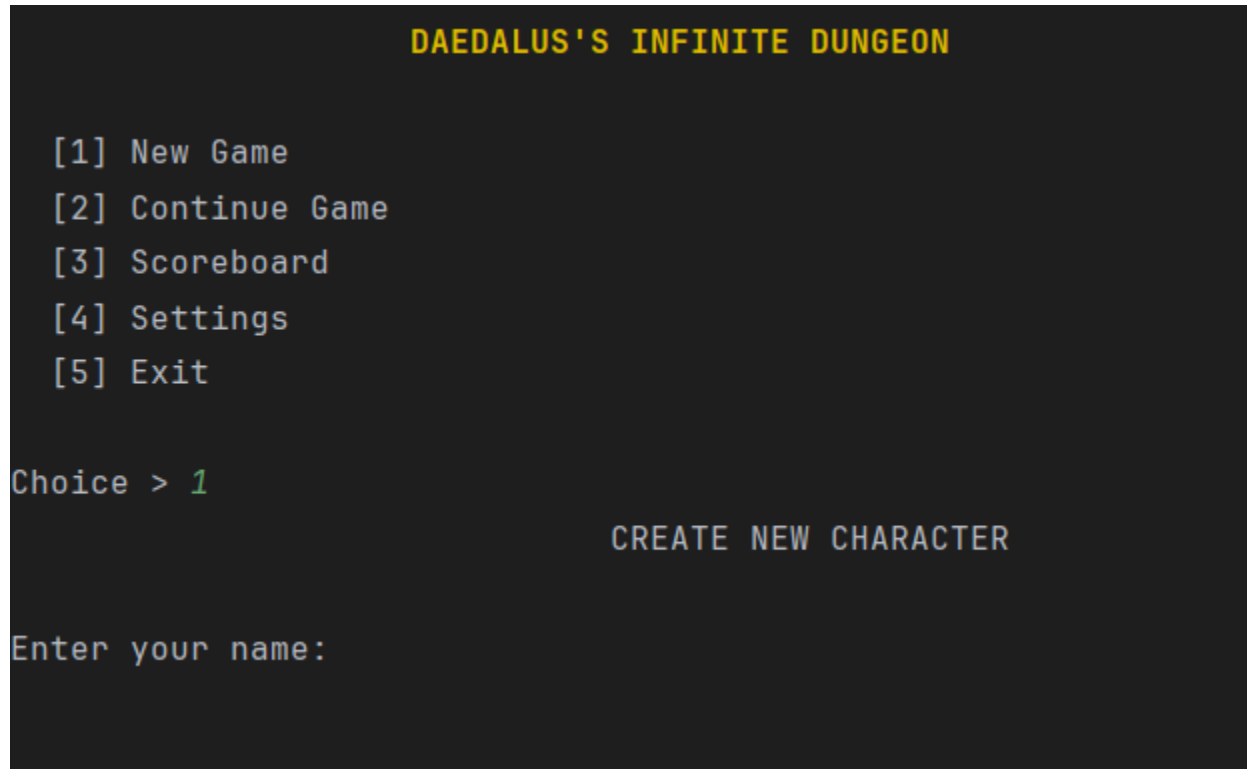

Daedalus' Infinite Dungeon is a dungeon crawler game inspired by the [game Rogue from 1980](#) which started the Roguelike genre, which is very popular today.

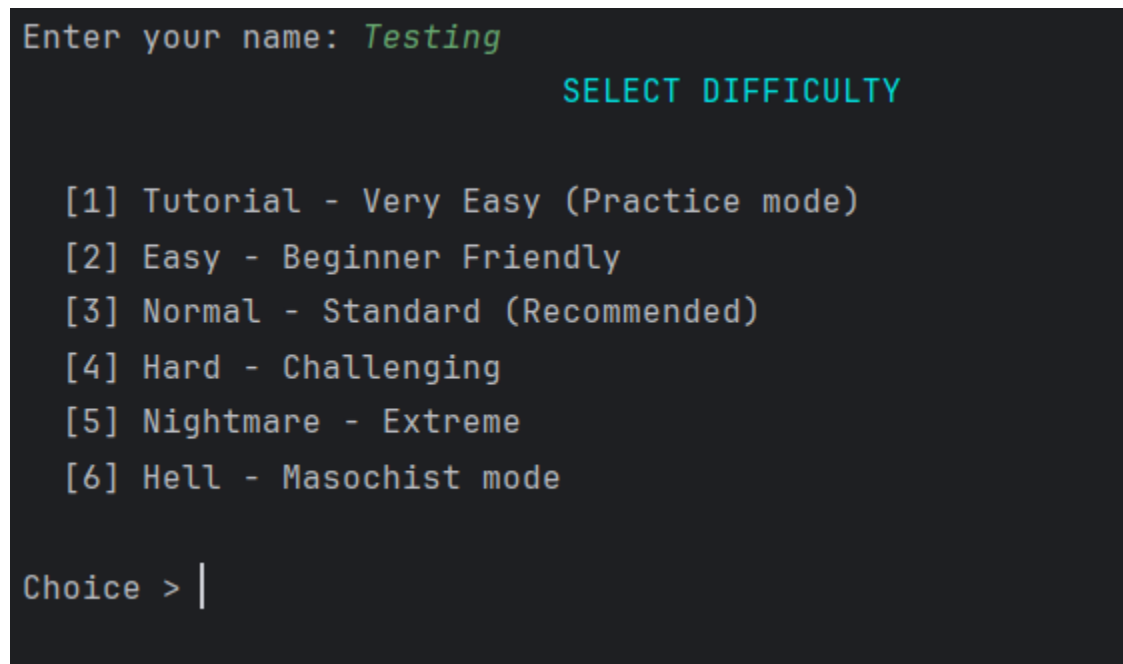

Upon starting the game by using **Main.java** the player is presented with this simple Main Menu (subject to change on release), where they are presented with 5 options / choices.

1. **New Game**
2. **Continue Game**
3. **Scoreboard**
4. **Settings**
5. **Exit**

New Game

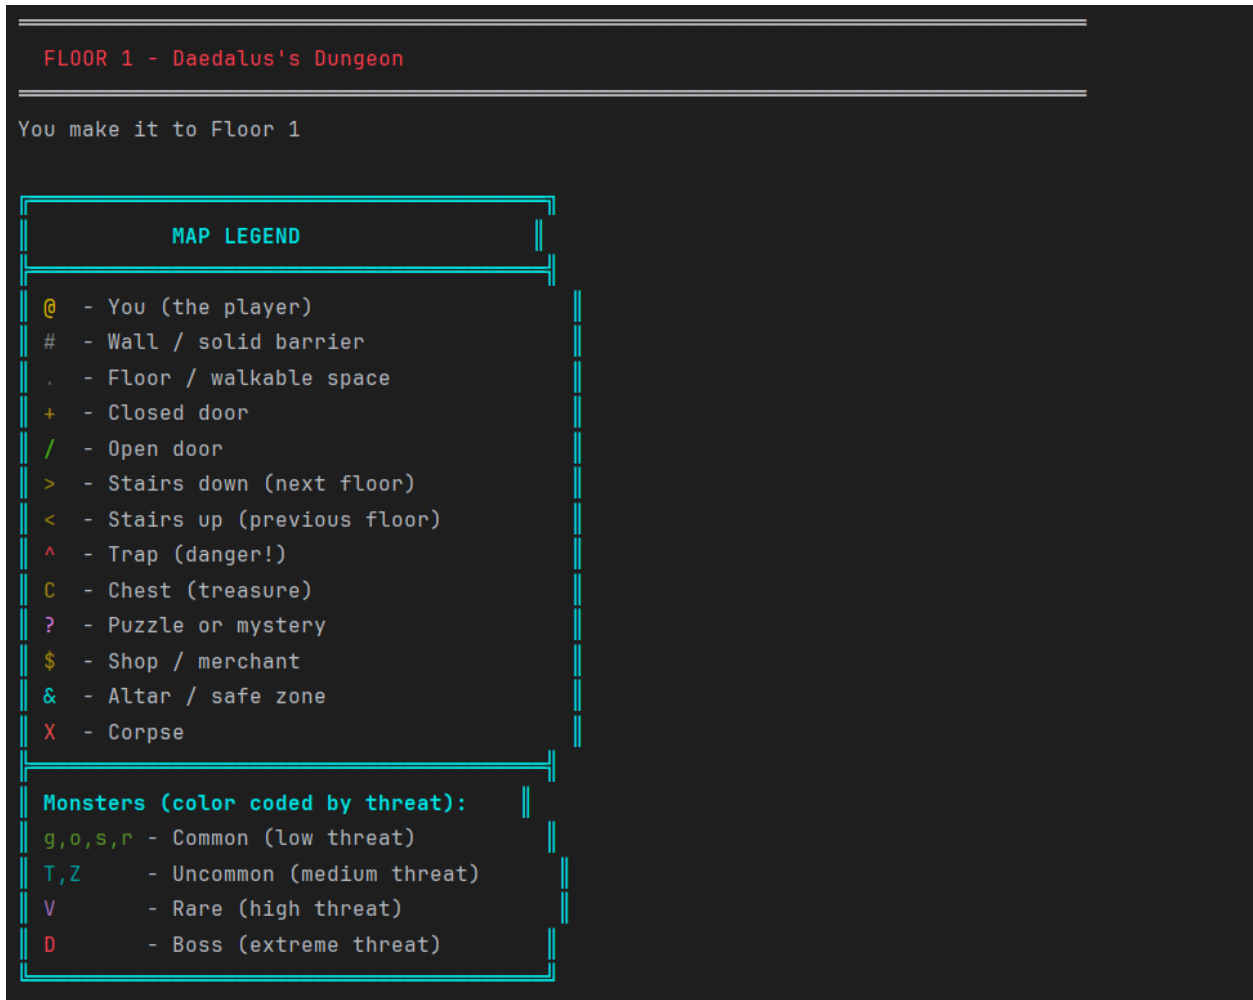

By entering “1” to start a new Game, the player will be prompted to enter in a name for their character. This name cannot be later changed in-game, and will be what is saved in the Scoreboard. The game may not accept non-UTF8 characters.

After entering in a name and clicking enter, the player would be presented with a difficulty selector. There are 6 difficulties, which affect all things from starting stats of the player character, to gear, loot, monsters, dungeon generation and other systems as well.

For first time players, I would recommend the Tutorial or Normal game modes, and recommend “Hell” to players who wish to get a low score.

The actual Game

```
ADVENTURER
Testing                                     Level: 1 | Floor: 1
HP [ ████████████████████████████████████ ] 100/100

[W/A/S/D] Move | [E] Interact | [I] Inventory | [1/2/3] Use Potion | [L] Lore | [C] Craft | [V] Save | [M] Map | [H] Help | [
Command >
```

(Actual size of graphical elements dependent on IDE Console as well as use of the screen size wizard inside of Settings. Some elements may change prior to release. Non definitive.)

This is the actual game.

The player starts on the first floor of Daedalus' Dungeon, a near infinite dynamic maze, home to countless monsters, and the final resting place of more than one adventurer. The player's goal is to escape the Dungeon, if they so want, or to keep exploring the Dungeon to get as large a score as possible, and get saved into the Leaderboard.

The player is represented by a yellow @ symbol and spawns in a safe room which, in lower difficulties, has a chest containing some loot that the player can obtain by moving or by typing E to interact.

W/A/S/D are used to navigate the Dungeon, acting as cardinal directions.

W - North / Forwards

A - East / Right

S - South / Backwards

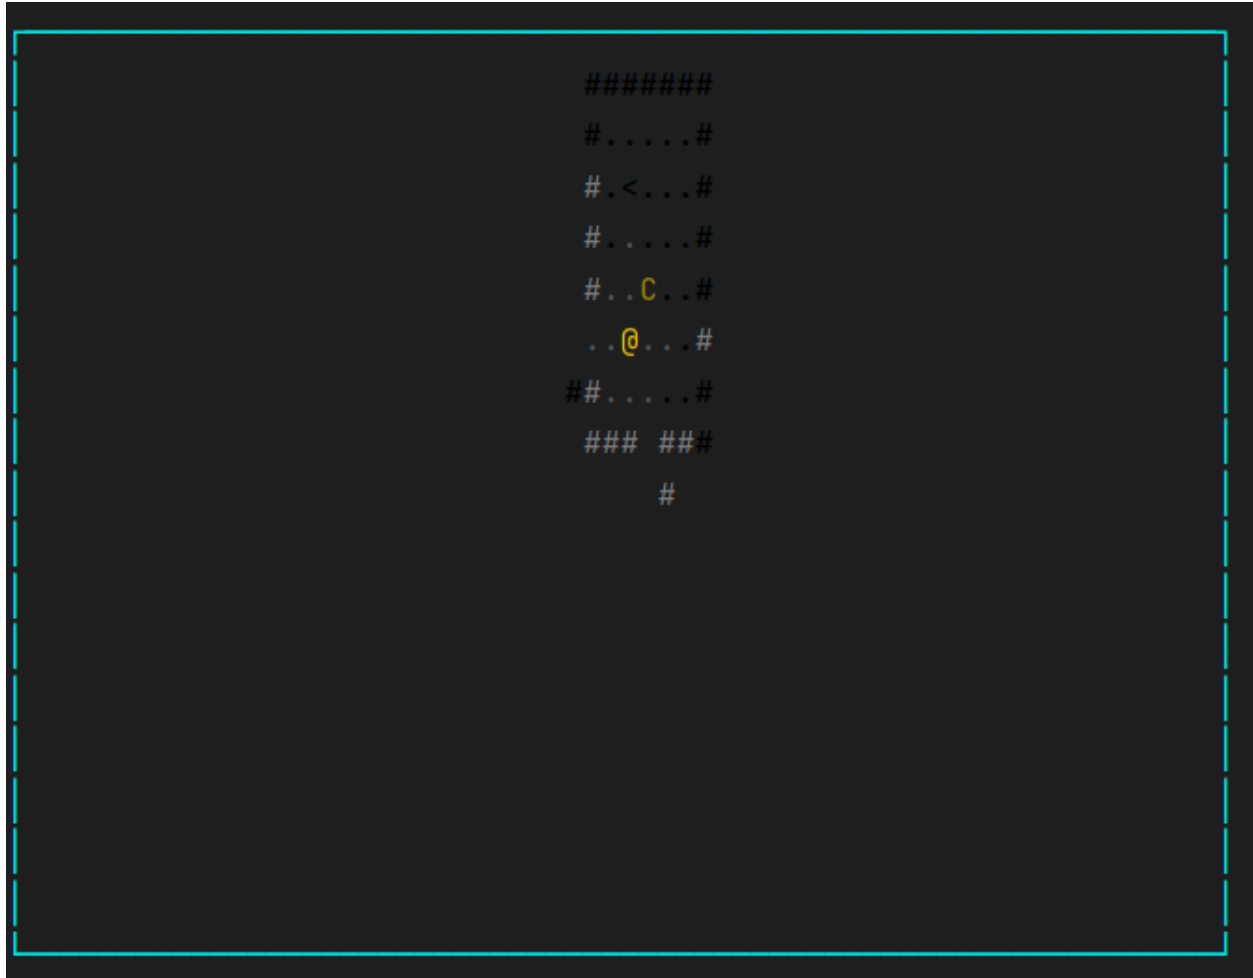

D - West / Left

```
[W/A/S/D] Move | [E] Interact | [I] Inventory | [1/2/3] Us
Command > s

You found a treasure chest!
You found 78 gold!
✓ == STARTING CACHE ==
This chest contains supplies left by previous adventurers!
✓ You found: Old Axe of Weary Hands (COMMON)
✓ You found: Dented Greaves of Decay (COMMON)
You found: Health Potion

Press ENTER to continue...
```

Getting closer to the chest can reveal some items; usually at least 1 weapon and 1 piece of armour and a potion.

Though a little hard to see on some consoles, the player has a range of view. This can be affected by events (such as lights going dark) or by items (like the torch) which can lower or increase view range. However, be warned, the player is not the only creature which can see in the depths.

```
Command > i

INVENTORY

INVENTORY

== WEAPONS ==
[1] Durable Falchion of Reliable Fortune | UNCOMMON | Sword | DMG 26 | Trait VAMPIRIC | Value 260g [EQUIPPED]
[3] Old Axe of Weary Hands | COMMON | Axe | DMG 25 | Trait SWIFT | Value 250g ↓

== ARMOR ==
[2] Bent Bracers of Lingering Doubt | COMMON | Gauntlets | DEF 3 | Set Ember | Value 45g [EQUIPPED]
[4] Dented Greaves of Decay | COMMON | Leggings | DEF 7 | Set Storm | Value 105g

== POTIONS & CONSUMABLES ==
[5] Health Potion | COMMON | Health Potion | Heal 30 | Value 25g

↑ = Better ↓ = Worse
Quick: [#e] Equip | [#u] Use | [#d] Drop | [A] Auto-Equip Best
Select item number to inspect/equip, or 0 to exit:
> |
```

Typing “i” for inventory reveals the inventory screen, which separates the inventory into 3 parts
Weapons - in red, where the player can swap weapons, only ever equipping ONE weapon at any given time. This cannot be changed in combat.

Armour - in yellow, the player can equip armour to gain some more defense, reducing the damage that they can take. Getting a full set of armour can also provide additional benefits such as more stats or better defense.

Potions - in purple, the player can have a large set of potions which can be used in combat.

The inventory is designed to be easy to use, or even fully automatic if the player doesn’t want to look at their gear, but using A to auto equip best.

Otherwise, the player can check, using the green up or red down arrows to see if gear is better or worse than what they currently have, and then use the index and e to equip it.

They can also drop items, though inventory limit is not a limiting factor. Usually.

```
↑ = Better ↓ = Worse
Quick: [#e] Equip | [#u] Use | [#d] Drop | [A] Auto-Equip Best
Select item number to inspect/equip, or 0 to exit:
> a

┌────────────────────────────────────────────────────────────────────────────────┐
│                                AUTO-EQUIP BEST GEAR                            │
└────────────────────────────────────────────────────────────────────────────────┘

✓ Equipped Leggings: Dented Greaves of Decay (DEF: 7)
✓ Auto-equipped 1 item(s)!

Press ENTER to continue...

                                INVENTORY

══ WEAPONS ══
[1] Durable Falchion of Reliable Fortune | UNCOMMON | Sword | DMG 26 | Trait VAMPIRIC | Value 260g [EQUIPPED]
[3] Old Axe of Weary Hands | COMMON | Axe | DMG 25 | Trait SWIFT | Value 250g ↓

══ ARMOR ══
[2] Bent Bracers of Lingering Doubt | COMMON | Gauntlets | DEF 3 | Set Ember | Value 45g [EQUIPPED]
[4] Dented Greaves of Decay | COMMON | Leggings | DEF 7 | Set Storm | Value 105g [EQUIPPED]

══ POTIONS & CONSUMABLES ══
[5] Health Potion | COMMON | Health Potion | Heal 30 | Value 25g

↑ = Better ↓ = Worse
Quick: [#e] Equip | [#u] Use | [#d] Drop | [A] Auto-Equip Best
Select item number to inspect/equip, or 0 to exit:
> |
```

Using A to auto equip here will have the system equip the piece of armour at index 4.

```
[W/A/S/D] Move | [E] Interact | [I] Inventory | [1/2/3] Use Potion | [L] Lore | [C] Craft | [V] Save | [M] Map | [H] Help | [Q] Quit Game
Command > c

                                ══ CRAFTING STATION ══

Available Recipes:

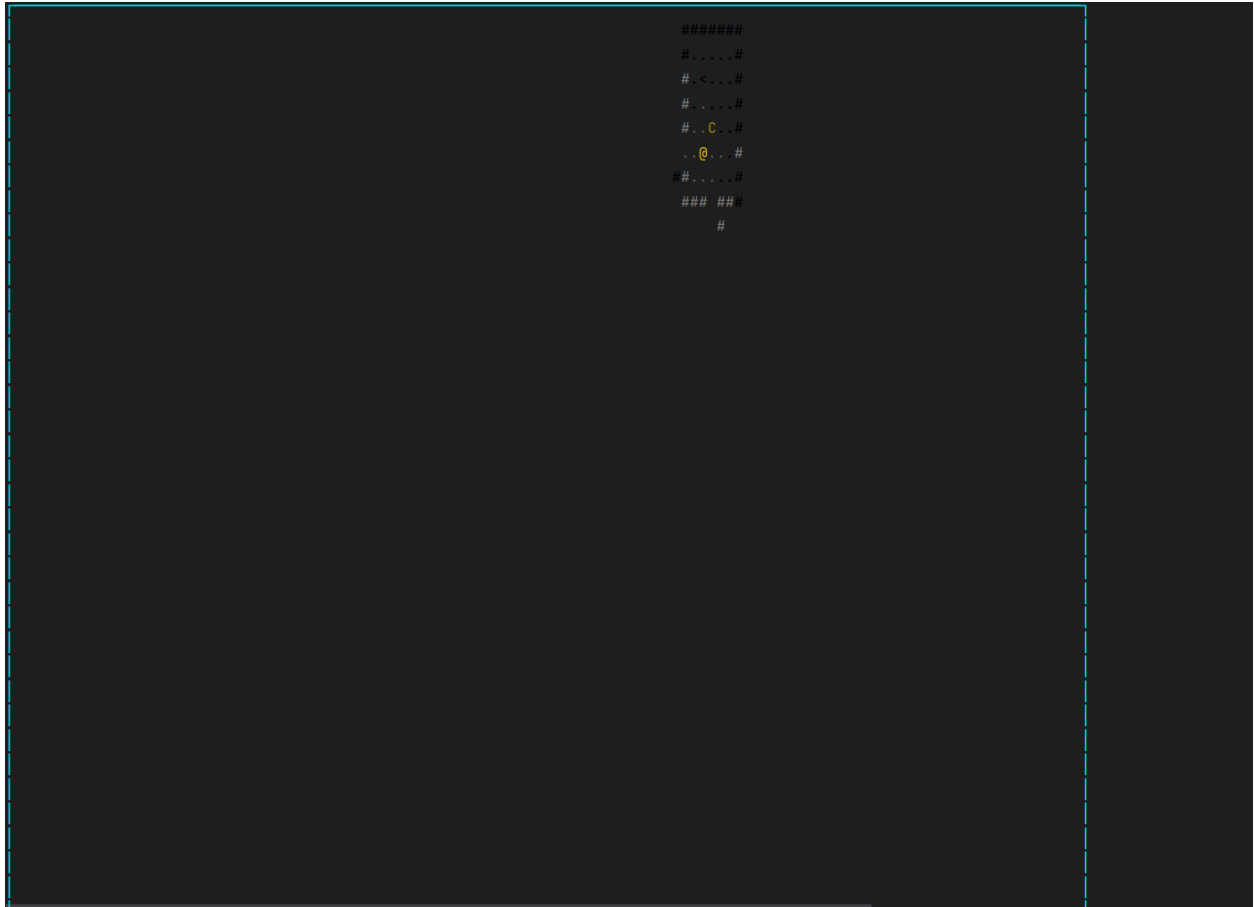

[1] Greater Health Potion
    Combine 2+ common items to brew a health potion
    Requires: 2+ COMMON items

[2] Elixir of Vitality
    Combine 3+ rare items to create a powerful elixir
    Requires: 3+ RARE items

[0] Back to exploration

Select recipe number >
```

By typing c - the player is able to craft 2 potions, which are better than what will be found within the dungeon bar boss drops. These potions are crafted by using equipment / gear that isn't being used, for example 2 swords or a chestplate and helmet. The rarity of the components given do affect the benefit of the potion.

M shows the actual size of the dungeon. Do not recommend on slower machines.

```
Command > H
```

GAME HELP & LEGEND

CONTROLS:

[W/A/S/D]

- Move up/left/down/right

[E]

- Interact with objects (chests, doors, NPCs)

[I]

- Open inventory

[1/2/3]

- Quick-use Health/Mana/Stamina potion

[L]

- View lore collection

[C]

- Open crafting menu

[V]

- Save game

[M]

- View full map with legend

[H]

- Show this help screen

[Q]

- Quit current floor

SYMBOLS & ICONS:

✓

- Success message

✗

- Error or failure message

⚠

- Warning or caution

➤

- Action taken (combat moves)

⚡

- Elemental bonus or combo

★

- Important item or high score

🏆

- Achievement unlocked

⚔

- Combat or offensive action

🛡

- Defense or defensive action

💀

- Death, corpse, or defeated enemy

```
MAP SYMBOLS:
@ - You (the player)
# - Wall
. - Floor (walkable)
+ - Closed door
/ - Open door
> - Stairs down (next floor)
^ - Trap (danger!)
C - Chest (treasure)
? - Puzzle or mystery
$ - Shop/merchant
& - Altar/safe zone
g,o,s,r - Common monsters
T,Z - Uncommon monsters
V - Rare monster
D - Boss monster

COMBAT INFO:
HP - Health Points (when 0, you die)
ST - Stamina (needed to use abilities)
[BLEED] - Damage over time effect
[VAMPIRIC] - Heals you when dealing damage
[EXECUTE] - Extra damage to low-health enemies
[SWIFT] - Restores stamina when attacking
COMBO - Build up by using attacking abilities

TIP: Press [M] to view the full map with detailed legend!
```

Typing H shows the Help menu, which shows a legend for the Map as well as gives a tip, and some other helpful information.

Q and S allow the player to save, though Q will make the player leave the game. The player may only save in safe rooms, which spawn after the first floor usually. The player can also pay 100 score to save regardless.

```
[W/A/S/D] Move | [E] Interact | [I] Inventory | [1/2/3] Use Potion | [L] Lore | [C] Craft | [V] Save | [M] Map | [H] Help | [Q] Quit Game

✓ You discovered a hidden map fragment! Nearby rooms revealed.
```

The player can sometimes find map fragments which reveal parts of the map unknown to the player.

Combat

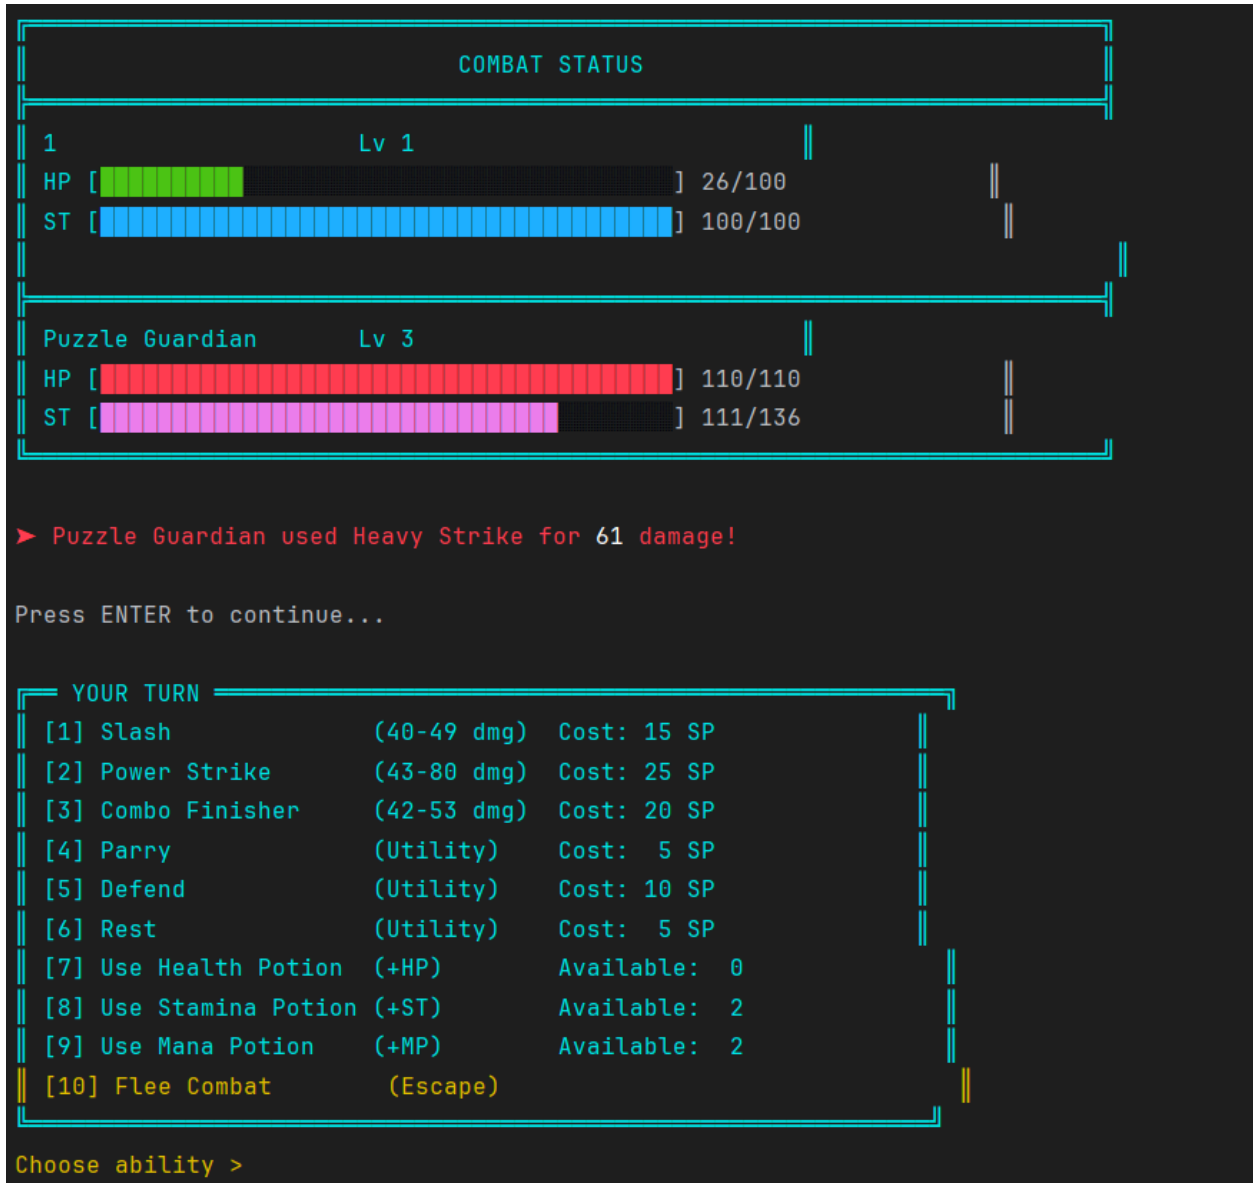

This is the combat start screen.

When the player or a monster encounters one another, they can start the battle - whoever strikes first is dependent on player speed & monster vision, as well as some other factors.

The HP gauge / bar represents the player's health. If this reaches 0, the player dies and the game is over.

The SP gauge / bar represents the player's stamina, used & needed for actions.

If a monster gets the jump on the player / attacks first, they may attack up to two times.

The player then some choices.

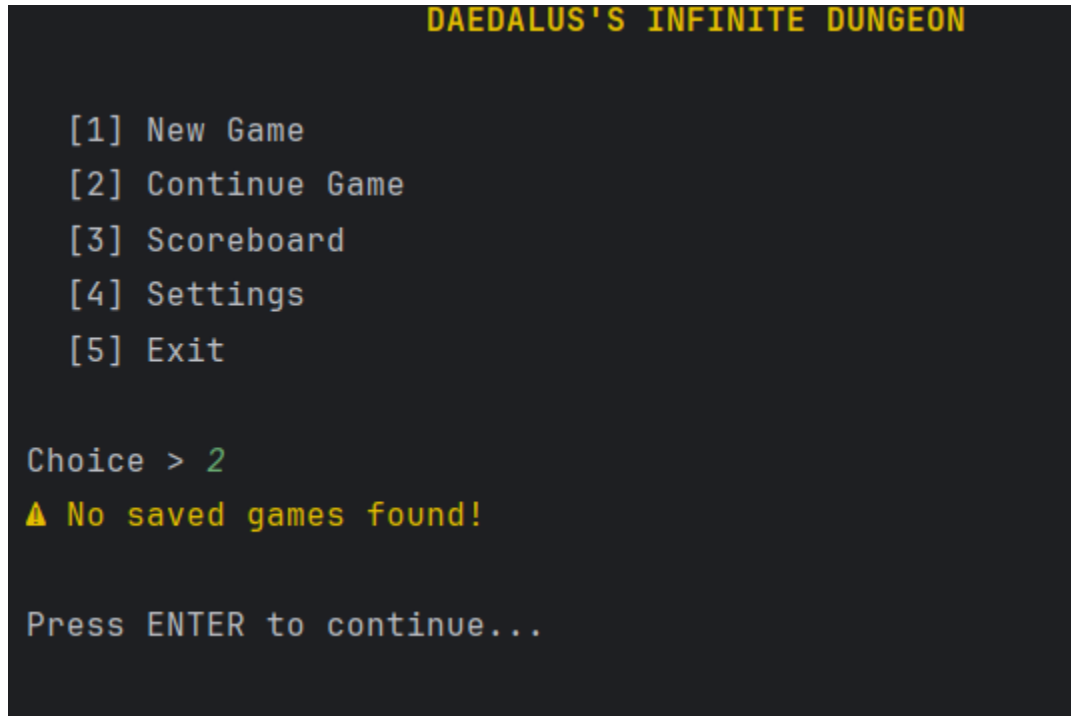

The first 3 options are attack options which cost SP.

The middle 3 options are for utility and can help to recover health and or stamina.

The last options allow the player to attempt to flee the monster or use potions to recoup losses.

If the player's health goes to 0, the player is dead and the game is over.

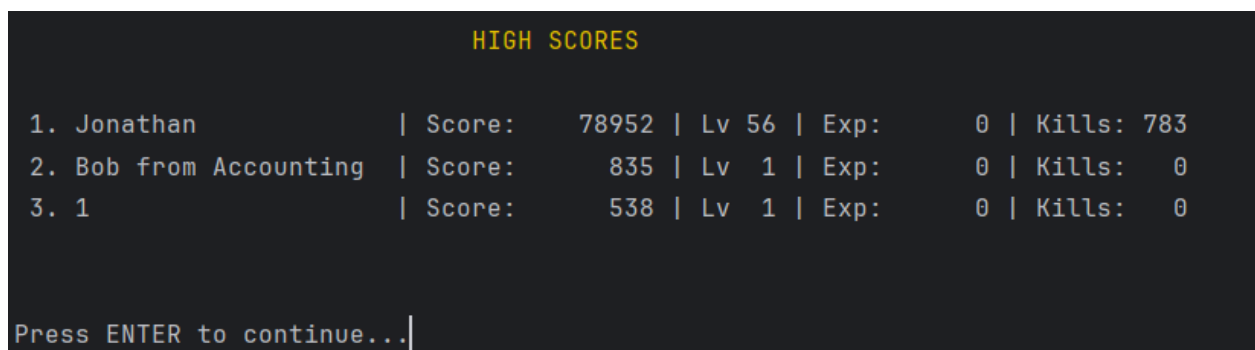

Continue Game

Option 2 will show a list of saved games if there are any available and will try to load them.

Note: Because of limited development time, saves do not work in the usual sense. Players will retain their attributes, level and score however any gear and items will be remade. This should not cause any massive issues to the player.

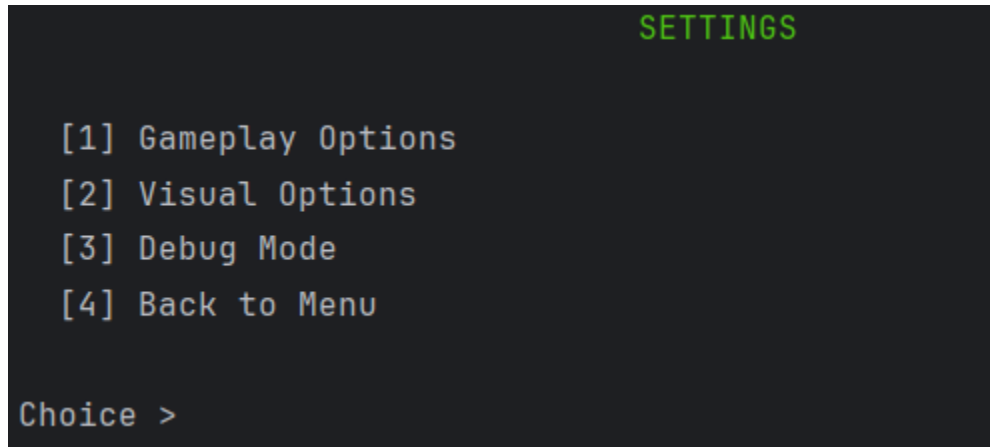

Scoreboard

The scoreboard shows a scoreboard which shows the name, score, level, exp and kills of the best players / runs.

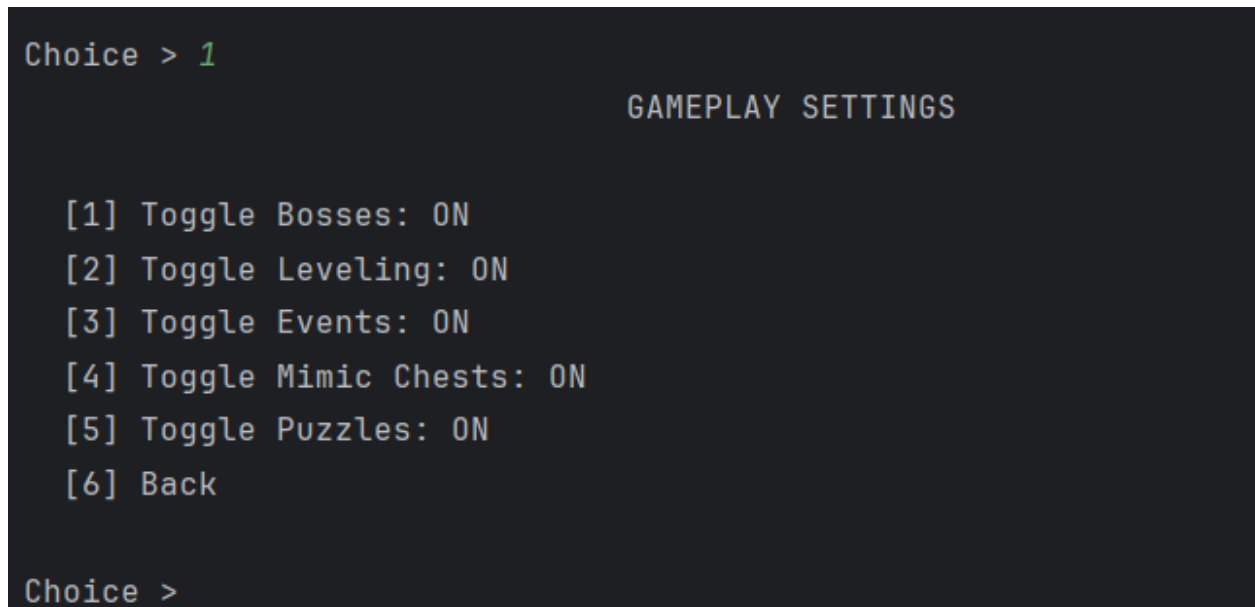

This is automatically updated when a player either finishes the game or is killed.

Settings

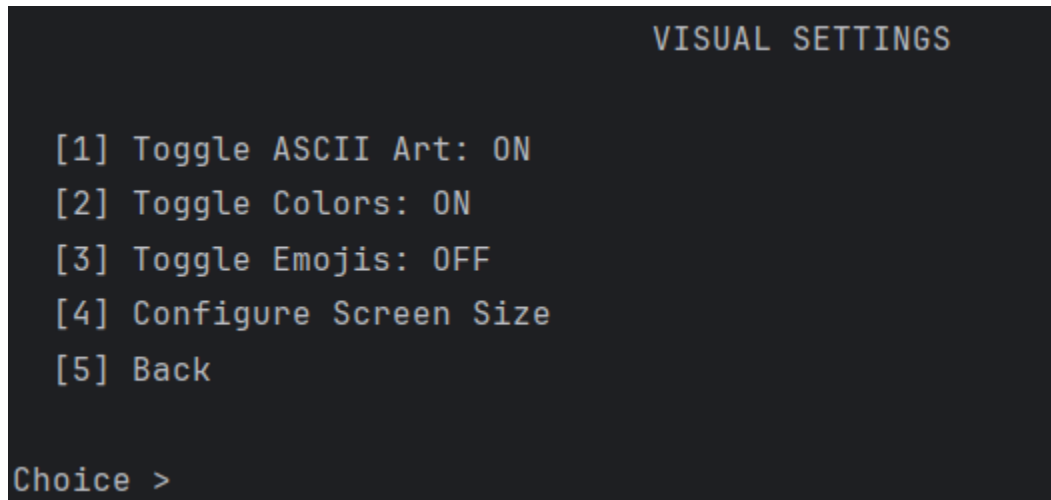

There are 3 settings options.

Gameplay Options

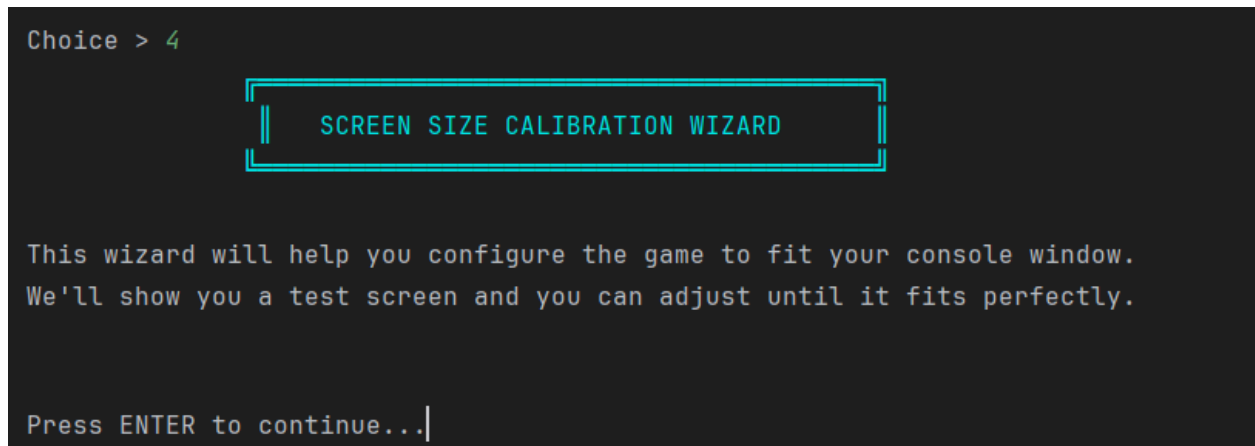

Gameplay options allow the player to toggle, on or off, certain aspects of the game. For full gameplay however, it is recommended to not turn these off.

Visual Options

There are 4 visual options.

Instead of ASCII characters, Emojis can be used in the map. Though this is not recommended.

The Screen Size Wizard is a tool to determine user-preferred screen size, which will be used for the **next created / started game**.

Enabling DEBUG mode will create a LOG file which will have some useful debugging information as well as more information about how the workings of the game and systems.

Jonathan Decondé - 3196362

It also enables access, in game, to the console.

Exit

This exits the game.

Facts, Answers & Questions

How to use:

- A) Launch game using Main.java (located in src/app/Main.java) if the folder is downloaded & unzipped correctly.
- B) If the console / terminal looks off, I would highly suggest IntelliJ's Java Console, or alternatively, use the Windows Terminal / Console.
- C) Play this game with the console / terminal in full screen as much as possible.
- D) Please go to settings > video settings > Screen Wizard to select a screen size appropriate for yourself.
- E) In addition, please browse the settings prior to playing / starting a game.
- F) DO NOT ENABLE DEBUG MODE
- G) I would highly suggest playing with the Tutorial difficulty, as it is the easiest & shortest to play through (start to end, 5 floors).

This game, due to time crunch at the last minute to make some changes, may run poorly on older / less powerful machines. I'm not liable for issues of laptops overheating and/or exploding.

This game was playtested by two people, myself included.

If the game is too difficult, all blame is not on my shoulders.

Although images in the manual may not be similar or accurate to what the game looks like on release, does not mean it is wrong - majority of the mechanics are the same, player-wise.
